

MUSTARD MILLING FACILITY

ULTRAVAPOR DEMONSTRATION RESULTS

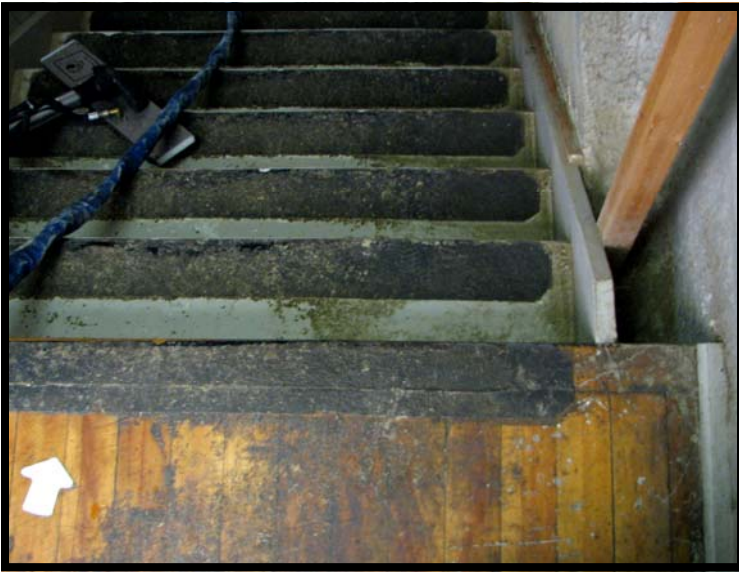

September 2007

Using a Super 9 KW UltraVapor unit mustard powder embedded in oil is easily removed from walls. The suction tool removes the soils and leaves the walls clean, dry and sanitized.

Heavily built up mustard "tar" removed from transport piping using brush tool and vapor only setting.

Mustard and dirt “tar” removed from hardwood floor and first wooden step as preparation for repainting. Brush tool and stainless steel brushes used.

Using floor suction tool to clean landing of mustard and dirt “tar”. To speed cleaning, detergent is added in a parallel circuit with the steam. The suction capability removes the water, detergent and dissolved soils leaving the floor clean and dry.
